SKNIFE POCKET KNIFE

PRECISION FROM THE WATCHMAKING CITY OF BIEL

The high-quality version of the sknife pocket knife in damask steel is particularly popular with knife collectors. Thus sknife has developed a full damask version in which the blade, the back of the blade, and the handle scales are made of corrosion-resistant damask steel with over 1'600 layers. The completion of this complex knife with a plain bearing made of high-tech ceramic is the version with a 51-diamond set blade back.
